Project Name: Pharmacy Management System

Problem statement:

This project aims at computerizing the manual process of visiting dealer outlets to buy medicines and the stock of drugs. Front end is implemented using HTML, CSS and JavaScript and back end using MySQL and Php language.

Software Using:

- Xamp(package of Apache server).
- MySQL database.
- php storm.

Aim of the work:

- Inventory of medicines in the pharmacy can be inserted into the database.
- Admin can view the stock details.
- Admin can add new medicines and suppliers.
- Admin can edit/delete stock details.
- Admin can enter customer and sales details.

Objectives:

- To easily maintain stocks in the pharmaceutical store.
- To keep track of sales.
- To keep track of medicines and their suppliers.
- To keep track of customer details.
